

Cells : Neurons

I like the shapes and patterns of neuron cells. They have very unique structures and do not look like a pattern from nature. The web-like lines look very delicate and intricate. I can see some futuristic shapes from the cells and I want to develop cool patterns from them and implement them around body and the surface of metal accessories for my characters. I chose the male figure template as a knight cyborg in the future. For topic 1 I chose Medieval period. This pattern will make a great combination with a armor from the late Medieval.
